

Rising Gr. 5-9th  
Summer of Space  
Astro-Photography

**Thursdays, July 18th & Aug. 8th @ 4:30 PM**

Have you ever wondered how NASA creates those amazing images of deep space? Join us on Thursday, July 18th and become apprentice astro-photographers by controlling real ground-based telescopes over the Internet. In this session, you'll access the user-friendly MicroObservatory robotic telescopes, and then use STEM (and STEAM!) skills to create your own colorful cosmic image!

Then on Thursday, August 8th the fun will continue as we process and print out images for an exhibit in the Library's Community room.

***You must attend the 7/18 session to attend part 2.***

***Registration is suggested.***
